

Wednesday 21st January 2021

Solve the following subtraction problems by subtracting to 10 first, and then counting back from 10.

For example, this is how to solve $15-7$ using this method.

Encourage your child to add the numbers over the jumps to check they have subtracted the correct amount.

Use your number line to subtract to 10 first and count back to solve:

$$11-6=$$

$$12-4=$$

$$14-5=$$

$$16-8=$$
